

Chunghwa Telecom Biodiversity and No Deforestation Commitment

Chunghwa Telecom fully recognizes the importance of biodiversity and no deforestation for ecological and climate stability. Therefore, we are committed to maintaining and fostering biodiversity, avoiding all types of deforestation activities, and promoting reforestation throughout our operations as well as within our value chain (including Tier-1 and non Tier-1) and with our partners. Our goal is to implement the United Nations Sustainable Development Goals (SDGs) 6, 12, 13, 14, 15¹, as well as the Post-2020 Global Biodiversity Framework, to reverse biodiversity loss by 2030 and ultimately achieve a vision of living in harmony with nature by 2050.

Commitment

- We will avoid engaging new operational activities including establish offices, stores, server rooms, and base stations in adjacent areas of critical biodiversity². For national infrastructure necessity purpose to establish telecommunications infrastructure in these areas, we will comply with relevant regulations to conduct environmental impact assessments to evaluate and monitor the impact of biodiversity. Additionally, we will follow the mitigation hierarchy (including avoid, minimize, restore, and offset) and work with partner to protect the ecosystem of critical biodiversity and **reach no net loss**.
- To those existing operational activities are located in adjacent areas of critical biodiversity. We will gradually initiate risk assessment and monitoring for natural resource utilization and biodiversity to develop strategies to mitigate and reduce our dependence on natural resources while actively working towards achieving **net positive impact on biodiversity by 2030**.
- We will conduct an inventory of current operational activities' usage of forest products (such as paper, packaging, building materials, etc.), and allocate resources towards reforestation, moving towards the goal of **no net deforestation by 2030**.
- Continuing to enhance the awareness of stakeholders (employees, customers, suppliers, and partners) about the importance of biodiversity and forest conservation.
- To participate local and international important biodiversity initiatives and collaborate with external experts (academics, consultants, non-governmental organizations, etc.) to grasp the development of biodiversity issues and plan long-term strategies.
- To regularly disclose the progress of biodiversity and no deforestation on our company website or in sustainability reports.

Action

- We conduct nature capital impact and dependency assessments on all operational locations within the company's scope.
- Require suppliers to comply with this commitment through "Chunghwa Telecom Supplier Code of Conduct".
- Before constructing major telecommunications facilities (such as international submarine cables and Data Center), we will obtain the permits from government in accordance with relevant environmental assessments regulations, in order to minimize the impact on the ecosystem.
- We collaborate with the Forestry and Nature Conservation Agency to engage in reforestation and rehabilitation efforts in key state-owned forests and coastal areas throughout Taiwan. Our eight-year goal is to plant 150,000 trees.
